### Shifting Perspectives and Leveraging Interlinkages:

### Integrating Assistive Technology into VNRs to Deliver a New Development Vision

Assistive technology is required by at least one in three of the global population, enables inclusion and participation, and is a cross-cutting accelerator of sustainable development. Join us for this Voluntary National Review (VNR) Lab exploring the integration of access to assistive technology into efforts to achieve the SDGs.

The Lab will introduce WHO assistive technology data tools, highlight coverage targets for vision and hearing assistive products, and encourage discussion regarding good practices used by governments to gather and use data to inform national planning inclusive of improving access to assistive technology within health, education, labour and/or social services coverage; and reporting on these achievements in future VNRs.

**Date:** Tuesday, 9 July 2024, 9:00–10:00am

**Catering:** 8:45am coffee and light refreshments

**Venue:** UN Secretariat Building, Room S-1522/23

**Modality:** In-person meeting held under the Chatham House Rule, conducted in English.
